ABOUT THE HACK:

The German Energiewende is the most exciting project in the world to stop climate change. And energy efficiency is key to its success. It is a big challenge that needs new heroes, inventions and business ideas to change the energy demand game! At the Energy Efficiency Hack 2017 you can become part of the solution to climate change.

CHALLENGE #1

powered by Danfoss

Smarter heating - Residents of multi family houses often find it difficult to customize their heating system to their needs. Can you build on the Danfoss Link Heating system to make the comfort, savings and emission reductions of smart heating available to everybody?

NETWORK -
get to know your potential future boss or land an internship

CONNECT -
share your ideas, show your talent and talk shop with experts

ENJOY YOURSELF -
get creative in a friendly atmosphere and stay for the party

WIN -
great prizes and get follow up opportunities

CHALLENGE #2

powered by: Sonepar & co2online

Recommendation engine for electric parts - When a malfunctioning or outdated electrical part needs to be replaced, private customers or craftsmen often act by force of habit. How can electricians be made aware of more energy efficient replacement parts?

HACK FOR A SUSTAINABLE FUTURE

NETWORKING

CHALLENGE #3

powered by Veolia & ÖKOTEC

Visualizing energy consumption in industry - Industrial processes are hard to decarbonize but decision-makers often even lack actionable information on energy consumption. How can company data about energy use be made actionable?
